

# Healthcare/Biosciences

Healthcare and Bioscience equipment losses create unique challenges for risk managers and claim professionals. The technology associated with medical and laboratory equipment is extremely advanced, and ultimately costly. In addition to the costs and technology, the other factors unique to healthcare losses stem from the complexity and specialization of the impacted equipment and systems.

Fortunately, AREPA has handled medical and laboratory equipment losses since our inception. Our experienced engineers and field technicians, many of whom are from the biomedical field, have provided guidance following property claims at hundreds of hospitals, and other research facilities.

AREPA has consulted and restored many types of medical and laboratory equipment, including:

- ▶ **CT Scanners and Controls**
- ▶ **MRI Systems and Controls**
- ▶ **X-Ray Systems**
- ▶ **Patient Monitoring Systems**
- ▶ **Mass Spectrometers**
- ▶ **Liquid and Gas Chromatographs**

Restoring Confidence in Your Equipment
